*Specification*

1. The disclosure is objected to because of the following informalities:
  - a.) On line 8 of page 7, replacing “buttery” with --battery-- is suggested.
  - b.) On lines 16 and 18, replacing “(kbp/sec.)” with --(kbps)-- or --(kb/sec.)-- is suggested.

Appropriate correction is required.

*Claim Rejections - 35 USC § 112*

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. A person skilled in the art would require undue experimentation to “comput[e] a reproduction time based on said plurality of parameters” which “includ[e] the bit-rate and a number of addresses” as claimed in claim 1. Page 8 of the specification, as amended by the April 5, 2007 amendment and supported by the verified translation of JP 2002-362533, describes computing a reproduction time according to one of the following formulae:

Monoaural Sound:

Reproduction Time (sec.)={the number of Addresses/Bit Rate (kbp/sec.)}/1

Stereo Sound:

Reproduction Time (sec.)={the number of Addresses/Bit Rate (kbp/sec.)}/2

One skilled in the art would not require undue experimentation to compute a reproduction time based on a number of bits and a bit-rate (see Col. 3, lines 46-51 of Millikan et al (US 6,928,039) and Paragraph 0004 of the machine translation of JP 2002-074920 provided by the Japanese Patent Office) because a number of bits divided by a bit rate results in a unit of time (bit units cancel out). Unlike a number of bits divided by a bit rate, a number of addresses divided by a bit according to Applicant's formulae result in units of {number of Addresses x (sec./kb)} and not in units of time. In addition, how the number of addresses is determined is not explained. Therefore, one skilled in the art is not enabled to make and use Applicant's optical disc apparatus invention, and claims 1-4 fail the enablement requirement.

#### *Response to Arguments*

3. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

#### *Conclusion*

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2627

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
